

H2E SUPPORTING CRITICAL INFRASTRUCTURE

March 25, 2020

Maintaining critical infrastructure is highly important and providing technical engineering expertise to our clients is a prime function of H2E! While H2E has 'closed' our physical offices in Liberty Lake, WA and Helena, MT in prudent measure due to the COVID-19 pandemic, we remain fully open and available to support your facility. Our engineers and designers are providing ongoing support to critical infrastructure facilities via remote connections and via site visits with appropriate precautions.

H2E is continuing our integrated support systems and responding to emergent requests as needed. If you need support, please contact us immediately. Remote access is the best solution. If site access is required, a prudent, site-specific plan will be co-developed that addresses both your and H2E's requirements to limit exposure. Our commitment to safety remains our highest priority.

Please contact your H2E Liaison listed below via phone or email. If you do not have an H2E Liaison, please contact anyone on the list...we are here to help you!
